rain-days-abs-self-groupingB

January 25, 2022

1 Find rain days in a specified region, given 8 upper atm variables and respective Gridmet data.

This notebook calculates average rain on a 128x128 grid, it then averages the respective 8 upper atm variables.

- this version loads netcdf files directly via xarray
- "Gridmet data" can now be replaced with any model's output

1.0.1 TODO items

- better graphs (i.e. include lat/lon scale)

```
[1]: from IPython import display
     import numpy as np

     #from skimage.metrics import structural_similarity as ssim
     import copy
```

```
[2]: # load netcdf files directly via xarray
     import xarray as xr
     import matplotlib.pyplot as plt
     import cartopy.crs as ccrs
     import cartopy
```

2 Configuration
